

**SUPERFAST
WINTER
GRASS SEED**

OFTEN COPIED NEVER EQUALLED

Battered sports pitch

Sports pitches are used heavily from the start of the season into the winter months and it's no wonder that come the colder weather, where play is often increased, pitches are starting to look damaged and worn out.

Restore a sward after the winter

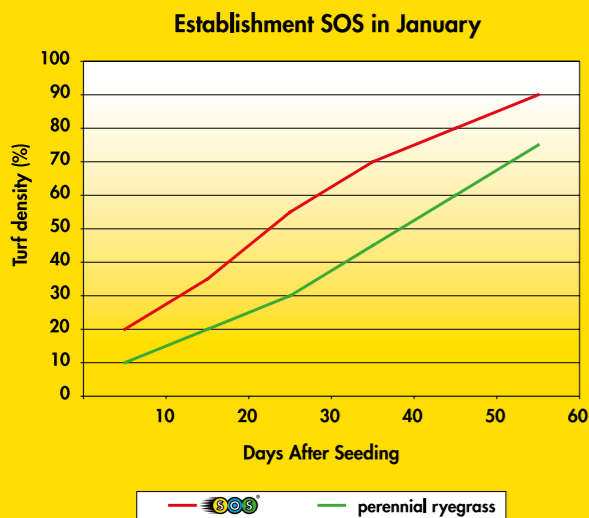

Winter damage suffered by your sward can also be effectively repaired with SOS. Swards can be overseeded with SOS early in the spring, enabling you to obtain a dense grass cover within a few

weeks, even under cold conditions.

You can overseed an entire pitch, or just affected patches.

Both situations demand excellence, choose SOS

- The fastest germination possible for overseeding and patching during the winter months
- The quickest solution for renovating sports pitches
- Reduces the recovery time
- Germinates, establishes and grows at low soil temperatures (as low as 3.5°C)
- Restores a sward quickly after winter wear

FAST GRASS AT LOW TEMPERATURES

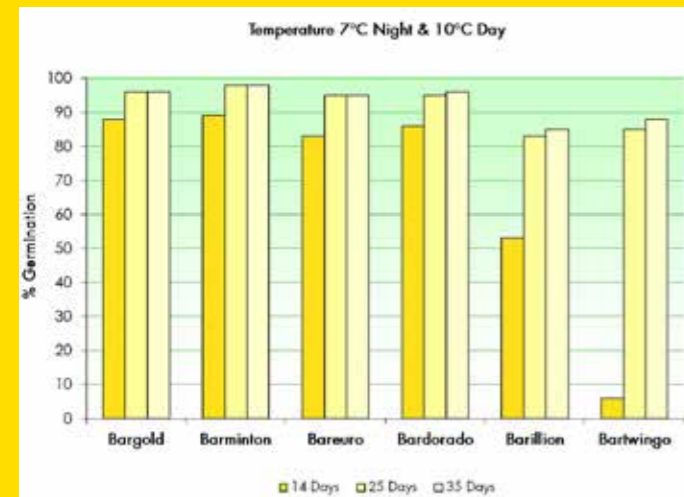

SOS to the rescue – before and during the winter

SOS is the ideal solution for fast recovery of your sports pitch.

SOS will germinate and rapidly establish at temperatures as low as 3.5°C, making the idea tool to maintain grass cover throughout the winter.

This graph shows just how quickly SOS establishes and restores the sward when it is overseeded in January at a soil temperature of 6.2°C. One month later the grass cover is already more than 60%. SOS is the perfect solution for overseeding at low temperatures.

(Laboratory studies at Barenbrug Research, Holland).

THE PERFECT PARTNER FOR SOS

Trials have proven that *Bardorado* perennial ryegrass (in BAR 50 SOS) will germinate very quickly at 7-10°C – 90% germination in a 14-day trial.

Bardorado offers a longer-term solution within the blend as it is a perennial ryegrass with excellent performance characteristics, wear tolerance and disease resistance.

FOOTBALL, RUGBY, GOLF AND RACING

A remarkable overseeding ryegrass blend providing superior germination and establishment for year-round sward cover, with excellent performance.

HOW BAR 50 SOS WORKS

- SOS germinates and grows at cool soil temperatures down to 3.5°C to sustain winter pitch cover
- *Bardorado* provides longevity to the blend with excellent performance characteristics, wear tolerance and disease resistance
- Faster establishment compared to all other 100% perennial ryegrass blends in all temperatures

USAGE

Ideal for renovation of permanent turf areas when fast establishment and/or cool temperature germination is paramount.

HOW TO USE IT

Sowing rate	30-40g per m ²
Sowing depth	4-8mm
Oversowing rate	20-40g per m ²
Mowing height	down to 20mm

IN THE BAG

- 50% **4IR-1** Annual ryegrass
- 50% **BARDORADO** Perennial ryegrass

FOOTBALL AND RUGBY

100% 5ARLT.

SOS 100 gives you access to the absolute fastest germination for emergency overseeding/patching in the winter. Remarkable overseeding annual ryegrass for speed over winter (not a permanent solution).

HOW SOS 100 WORKS

- SOS germinates and grows at cool soil temperatures down to 3.5°C to sustain winter pitch cover

USAGE

- Ideal for mid-season repair of perennial ryegrass winter sports pitches.

HOW TO USE IT

Sowing rate	30-40g per m ²
Sowing depth	4-8mm
Oversowing rate	20-40g per m ²
Mowing height	down to 20mm

IN THE BAG

- 100% **4IR-1** Annual ryegrass
