

Grass for Agriculture

The Barenbrug UK range of grass and clover mixtures, for all types of farms, are created to suit each type of grassland and farm management system, providing environmental benefits, biodiversity, high-quality forage yield, better palatability and improved animal health. Use our grass mixture selector tool.

OVERSEEDER

Restores productivity to a long-term ley

- OVERSEEDER is a 100% ryegrass blend for areas of high fertility
- Forage production is expensive - get your sward back into maximum, long-term productivity by overseeding

Key benefits

- Increases the proportion of productive ryegrass in the sward
- Improves the quality of the grass for better animal performance
- Improves the Nitrogen efficiency of the sward
- Repairs the damage caused by poaching of grazing swards
- Specifically designed to work best with specialist overseeding techniques
- FINTONA is the highest yielding perennial ryegrass ever listed in the UK with unrivalled spring grazing yields and impressive sward density for the type
- Includes varieties which are aggressive enough to establish in an existing sward, yet easy to manage

When to sow

Sow when soil temperature is above 6°C but preferably over 8°C, especially in Northern Ireland.

When to graze & cut

OVERSEEDER is 100% ryegrass mixture for use with specialist overseeding techniques in areas of high fertility. OVERSEEDER is flexible and can be used on fields for cutting or grazing or a mixture of both and it is suitable for any class of livestock.

Available with clover

Specifications

Sowing rate/acre	10kg per acre
Sowing rate/ m ²	664 seeds/ m ²
Sowing depth	Up to 10mm
Soil temperature	>6°C
