

Grass for Agriculture

The Barenbrug UK range of grass and clover mixtures, for all types of farms, are created to suit each type of grassland and farm management system, providing environmental benefits, biodiversity, high-quality forage yield, better palatability and improved animal health. Use our grass mixture selector tool.

COMBI

Flexible, extensive ley for silage and grazing

- A blend of the best recommended intermediate and late heading ryegrasses designed to produce a very high-yielding, dense, palatable, top class cutting mixture which will also produce quality grazing
- Combi's high proportion of tetraploid varieties ensure better drought resistance and higher water-soluble carbohydrate content

Key benefits

- Flexible cutting and grazing mixture with excellent yield and quality
- Higher proportion of tetraploid varieties ensures better drought resistance and higher water-soluble carbohydrate content and faster recovery after grazing or cutting
- GALGORM – New for 2021, holds top position for total yield in both grazing and silage management. No other intermediate diploid variety on the list produces more ME yield per hectare under grazing management (106% of the mean of all intermediate diploid varieties on the list) and is very persistent in grazing swards
- FINTONA: Ground breaking variety, top ranked under grazing and silage management in terms of yield and quality
- GRACEHILL is an excellent all-round performer right across the growing season, producing superb annual yields of high digestibility grass under both grazing and silage management along with extremely high metabolizable energy (ME) yields per hectare
- Uses all Herbage Varieties Guide recommended varieties

When to sow

Perennial ryegrass germinates at 8°C; ensure this is sown when the soil temperature is above 8°C.

When to cut & graze

Offers a high-quality mid-May silage production with excellent sward density for exceptional silage cuts of extremely nutritious forage.

Specifications

Sowing rate/acre	14kg per acre
Sowing rate/m ²	1,783 seeds/m ²

- Short Term
- Medium Term
- Long Term

Characteristics

Sowing depth	Up to 10mm
Soil temperature	>8°C
Min. cutting/grazing height	1500kgDM/ha ~8cm
Pack size	14kg

Composition

4.00kg Galgorm	Perennial Ryegrass Inter Dip.
3.00kg Fintona	Perennial Ryegrass Inter Tetr.
4.00kg Glenarm	Perennial Ryegrass Late Dip.
3.00kg Gracehill	Perennial Ryegrass Late Tetr.
